proxSafe Terminal

deister electronic provides high end technology for guarding, maintenance and facility management.

proxSafe is an intelligent solution for management and safeguarding of keys and valuables in secured areas.

proxSafe Terminal

The proxSafe Terminal stores information about users, keys and access rights. It is the place where users gain access to the keys they wish to take.

Identification is possible by proximity card, PIN or both. Only users get access to their designated keys within their pre-defined time frame.

The proxSafe Terminal provides Quick-Key-Return. Users simply present the key tag to the reader and return the keys. They don't need to press any buttons.

All keys can be traced with the key status information which can easily be invoked on the terminal display.

The Terminal can be provided together with genuine proxSafe user cards or alternatively with a deister reader. deister readers support most current identification.

Display and menu provide a simple, yet versatile way to access the system and to program keys and user cards.

Your benefits at a glance

- **easy handling** for taking or returning keys
- **Quick-Key-Return**
- **overview of** the actual key status at any time
- **can be integrated** in existing proximity card systems
- **versatile deBUS interfaces** allow integration into existing software packages
